**EB is a genetic skin disorder that affects 1 in 50,000 live births.
For information about EB or DebRA go to www.debra.org**

DebRA of America is the only national non-profit organization dedicated to research and direct services for Epidermolysis Bullosa (EB). EB is a rare genetic skin disease that causes the skin to be so fragile that the slightest friction can cause severe blistering—inside and outside the body. Today there is no cure and the only treatment is daily wound care and bandaging.
